

PRA-1 TESTING LABS & PRICES

Currently the world percentage of PRA-1 carriers in Papillon and Phalenes is 16.3% out of over 1600 dogs tested and affected rate is 1.4% and clear dogs are 83.3%. So almost 2, (1.7) out of every 10 have the PRA-1 mutation.

With more breeders testing their dogs for PRA-1 the more laboratories are running the test. Price is going down and each has a different offer and some of them send free swabs, others don't. Their price for analyzing DNA is the same for blood and swab. Here is the latest price chart for the labs we know offer the correct PRA-1 test.

OptiGen USA, \$ 90.00 for one test. You get 5% discount for doing your order online - any order, any time during the year. 4 times a year they offer another 20% discount so adding the two together gives "up to 25% off". They will also work with clubs and offer 20/20 Clinics that run in conjunction with an event - such as PCA and its National Specialty and the offer is "up to 25%" as described above. OptiGen offers to send you swab kit free of charge.

Paw Print Genetics USA, \$ 80.00 for one test. They offer discounts many times during the year but only for few days at a time. Their offers are different, from multiple dogs in one order to combination of tests. It is worthwhile to subscribe to their newsletter to receive timely news of their discounts. They will usually work with clubs to offer additional discounts in conjunction with an event (National Specialty, for example). Paw Print Genetics will send you a swab kit when you place your order.
